EASi-Raft™

EASi-Raft™

A flexible new pre-fabricated suspended raft system

EASi-Raft™

The right choice for you

The problem:

Designers, developers and landlords are increasingly demanding complex ceiling rafts and canopies designed to enhance commercial ceilings. This has given rise to several design, manufacture and installation problems that can prove expensive and time consuming to resolve.

The solution:

The EASi-Raft system tackles all of these problems and more by providing a simple, modular system that not only offers unlimited design options but also provides a cost effective, sustainable and manageable product, ideal for modern commercial and retail installations.

The EASi-Raft modular lighting raft system is designed around a simplified core set of primitive shapes and modules. When combined, these core shapes provide an extremely innovative and flexible method of construction capable of delivering light rafts in an unlimited number of designs.

All EASi-Raft module dimensions are designed to conform with standard suspended ceiling grids and are capable of receiving standard and non-standard light fittings.

EASi-Raft can be **installed in just one shift** which opens up further opportunity to retro fit into existing locations for minimal disruption and maximum impact.

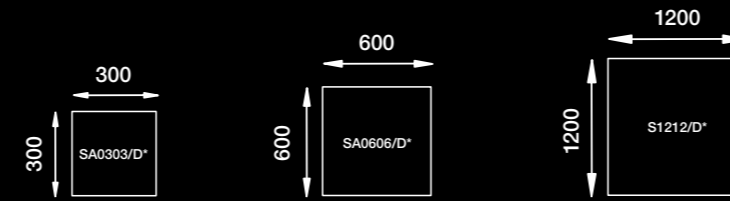

There are also **tax advantages** as the structures are classed as portable fixtures and fittings which fall into capitalised expenditure.

Saves Time:
up to 80% quicker to install

Saves Cost:
up to 70% less than traditional designs

The EASi-Raft Shapes

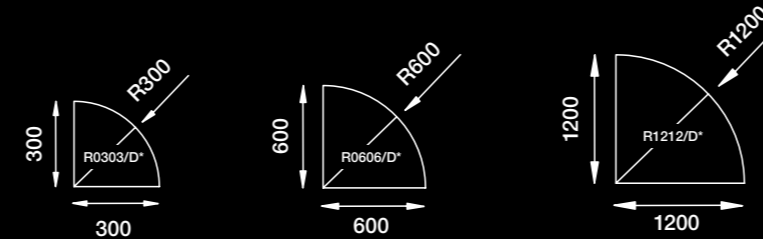

The Square

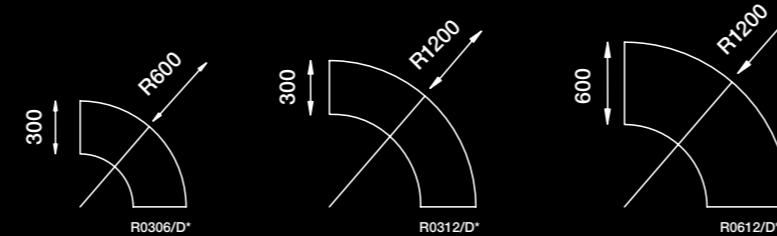

The Rectangle

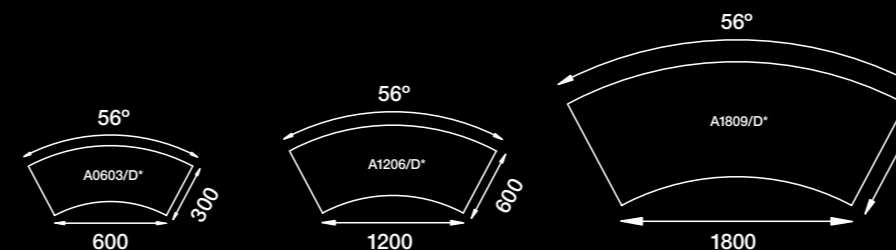

The Quadrant

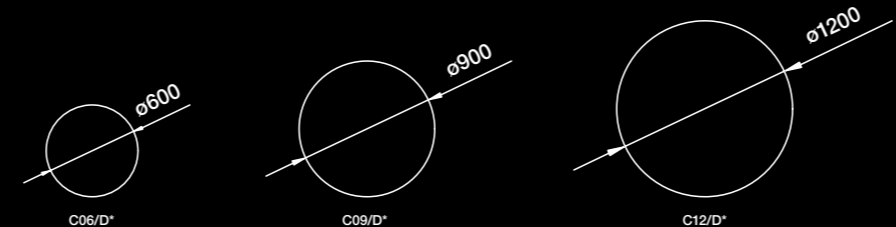

The Radius

The Arc

The Circle

* Standard depths available are 50mm, 100mm, 150mm, 200mm, 250mm & 300mm ** Other shapes and sizes are available on request
